

Question 1

What is an Operating System?

Answer

An Operating System is a program that controls the execution of application programs and acts as an interface between users and hardware. It manages hardware resources, provides a user-friendly interface, and ensures efficient and secure operation of applications.

Question 2

Explain process management.

Answer

- Process management handles creation, execution, and termination of processes. - Allocates CPU and resources to multiple processes for multitasking. - Ensures efficient system performance through resource management.

Question 3

What is multiprogramming?

Answer

Multiprogramming is an operating system where multiple programs/processes run in memory at the same time, and the CPU switches between them to optimize resource usage.
